THE NEED FOR ANTIOXIDANTS IN HORSES

- *Anti-oxidant deficiency in horses can result in cell and tissue damage that can lead to muscle disorders, tying-up, poor immunity, fragile red blood cells and lowered fertility.
- *Free radicals can damage the membranes of red blood cells as they circulate in the bloodstream.
- *A deficiency of anti-oxidants may also delay muscle recovery and rebuilding after strenuous exercise.
- *Selenium and Vitamin E are two of the major anti-oxidant nutrients
- *Selenium exerts its anti-oxidant effect within the cell itself, while Vitamin E works within the cell membranes.

ENERGY DRINK FOR YOUR HORSE

RIBOSE PERFORMANCE SERUM

Increases Energy & Endurance & Enhances Muscle Recovery
 Rebuilds Muscle ATP Stores
WILL NOT TEST POSITIVE

Clinically proven, ActiVEX Ribose Serum provides the key building blocks for the production of ATP, maximizing the horse's ability to produce more energy. Elevating performance while postponing fatigue. Feed 4 oz approximately two hours prior to competition. **ACT400 4oz bottle \$19.99**
